

Environmental Approval Granted for New Clinic Site

Engineering plans detailing the physical clinical structure we intend to build at the edge of La Entrada had been submitted to SERNA, the Honduran agency charged with assessing environmental impact. In addition, a proposal was submitted outlining the method by which we will dispose of waste and water coming from the clinic. Our proposed plans were approved the week before Christmas, clearing the last bureaucratic hurdle and paving the way for construction to begin as soon as MA is prepared to move forward.
